

Access from anywhere

Hosted on i-nexus' secure private cloud

Strategy execution as-a-service

i-nexus is a subscription-based software-as-a-service (SaaS) hosted on i-nexus' secure private cloud. As a hosted SaaS application, there is no software for you to install and maintain, saving you costly upfront infrastructure costs and scarce IT time.

And with pay-as-you-go term licensing, your software costs are predictable and transparent, avoiding the expense of a large upfront license. All helping you to minimise your cost of ownership while delivering maximum return. Plus, you automatically receive regular upgrades as we deliver updates and new features.

Secure private cloud hosting

Your data is valuable and sensitive. Yet you want the ease-of-access and ease-of-ownership that only the cloud provides. i-nexus' secure private cloud offers the best of both worlds, using dedicated servers to securely and reliably deliver our services to customers. Additional peace of mind comes from knowing that each customer has its own database.

i-nexus cloud operations centres are hosted on Amazon Web Services and located in the UK and the USA, with i-nexus holding ISO 27001 accreditation for information security with SGS.

Proven enterprise readiness

Large companies share many characteristics: multi-national operations, multiple business units, hundreds of cross-functional teams, and thousands of employees to name but a few. And with complexity and size comes stringent IT requirements and the need for strategy execution solutions that offer the flexibility and configuration choice needed to wrestle complexity into submission.

Introducing i-nexus, the only strategy execution solution that's ready for the enterprise. Don't just take our word for it. i-nexus is used by many of the world's largest organisations.

Secure

From our ISO 27001 accreditation for information security to industry-standard data encryption, authentication and permission-based authorisation, i-nexus provides the assurance you need that your data is securely managed.

Scalable

i-nexus effortlessly scales with your deployment, providing proven scalability that meet the needs of the world's largest companies. Our customers routinely have thousands of users with tens of thousands of initiatives under i-nexus management.

Reliable

Meeting industry-accepted availability standards with automated backups and disaster recovery capabilities, i-nexus delivers the reliability you demand from your enterprise software partners.

Global

i-nexus has full multi-language, multi-currency and multi-time zone support so you can confidently collaborate across your international operations.

Open

i-nexus seamlessly integrates with your existing enterprise architecture. Use our web services Integration Module to bring data into i-nexus or synchronise data between i-nexus and other systems like financial and ERP solutions such as SAP®.

Flexible

One size does not fit all and the i-nexus platform has designed-in flexibility to accommodate the unique needs of each of our customers.

"Before i-nexus, we were struggling with spreadsheets to capture process data and publish performance risk scorecards. Now, i-nexus manages the entire process, from data collection and entry, to automated metric reporting. Enabling our stakeholders to access real-time performance reports is helping to drive continuous improvement into everyone's daily activities."

Hervé Leroy, Program Manager, Black Belt Centre, Société Générale
